The screenshot shows the Veeam Backup and Replication console. On the left, the 'Jobs' folder is expanded, and 'Backup 10' is selected. The main pane displays the job details for 'Backup 10', which is a 'Proxmox VE Backup' job. The job status is 'Stopped', and it was last run 17 hours ago with a 'Success' result. Below the job list, a detailed summary and action log are shown.

SUMMARY		DATA		STATUS		THR
Duration:	03:50	Processed:	21,8 GB (100%)	Success:	1	✓
Processing rate:	278 MB/s	Read:	21,8 GB	Warnings:	0	
Bottleneck:	Source	Transferred:	4,4 GB (5x)	Errors:	0	

The action log shows the following steps:

- Windows10 : Processing (02:10)
- Backing up the VM Windows10 in the "HotAdd" mode
- The worker worker was shut down successfully (00:02)
- Load: Source 96% > Proxy 61% > Network 8% > Target 28%
- Primary bottleneck: Source
- Job finished at 6/10/2025 3:17:28 PM

At the bottom, the console shows '1 job selected', 'Connected to: localhost', 'Build: 12.3.1.1139', 'Enterprise Plus Edition', and 'Evaluation: 22 days remaining'.

The screenshot shows the 'Backup 10' job progress window. The job progress is at 100%, and it is processing 1 of 1 VMs. The summary and data sections are identical to the previous screenshot. Below the summary, a 'THROUGHPUT (ALL TIME)' graph is displayed, showing a green area representing the throughput over time. The speed is indicated as 856 MB/s. At the bottom, there are 'Show Details' and 'OK' buttons.

Pour faire une restauration d'une Backup

Cliquer sur Restore puis sur votre serveur.

The screenshot shows the Veeam Backup & Replication console. The top toolbar includes buttons for Backup Job, Replication Job, CDP Policy, Backup Copy Job, Copy Job, SureBackup Job, Restore, Import Backup, Export Backup, and Security & Compliance. The left sidebar shows the 'Home' view with a tree structure: Jobs, Backups, Disk, Last 24 Hours, Success, and Failed. The main pane displays a table of backup jobs. One job is selected: 'Backup' of type 'Proxmox VE Backup' with 1 object, status 'Stopped', last run '38 minutes ago', last result 'Success', and next run '<Not sch'. Below the table, a detailed view for the selected job is shown, including a summary table and a list of actions.

SUMMARY		DATA		STATUS	
Duration:	02:59	Processed:	209 MB (100%)	Success:	1
Processing rate:	7 MB/s	Read:	209 MB	Warnings:	0
Bottleneck:	Source	Transferred:	69,7 MB (3x)	Errors:	0

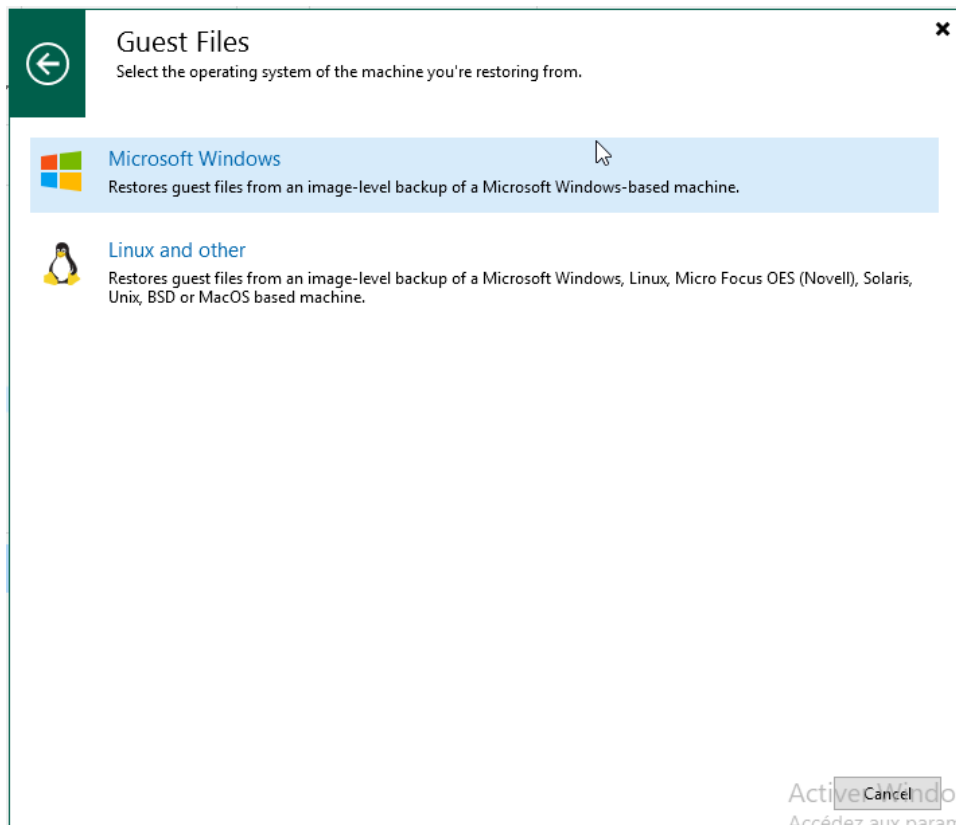

Name	Status	Action	Duration
Windows10	Success	- Windows10 : Processing - Backing up the VM Windows10 in the "HotAdd" mode - The worker PVE was shut down successfully - Load: Source 96% > Proxy 9% > Network 3% > Target 0% - Primary bottleneck: Source - Job finished at 6/4/2025 11:33:56 AM	01:14

1 job selected Connected to: localhost Build: 12.3.1.1139 Enterprise Plus Edition Evaluation: 29 days remaining

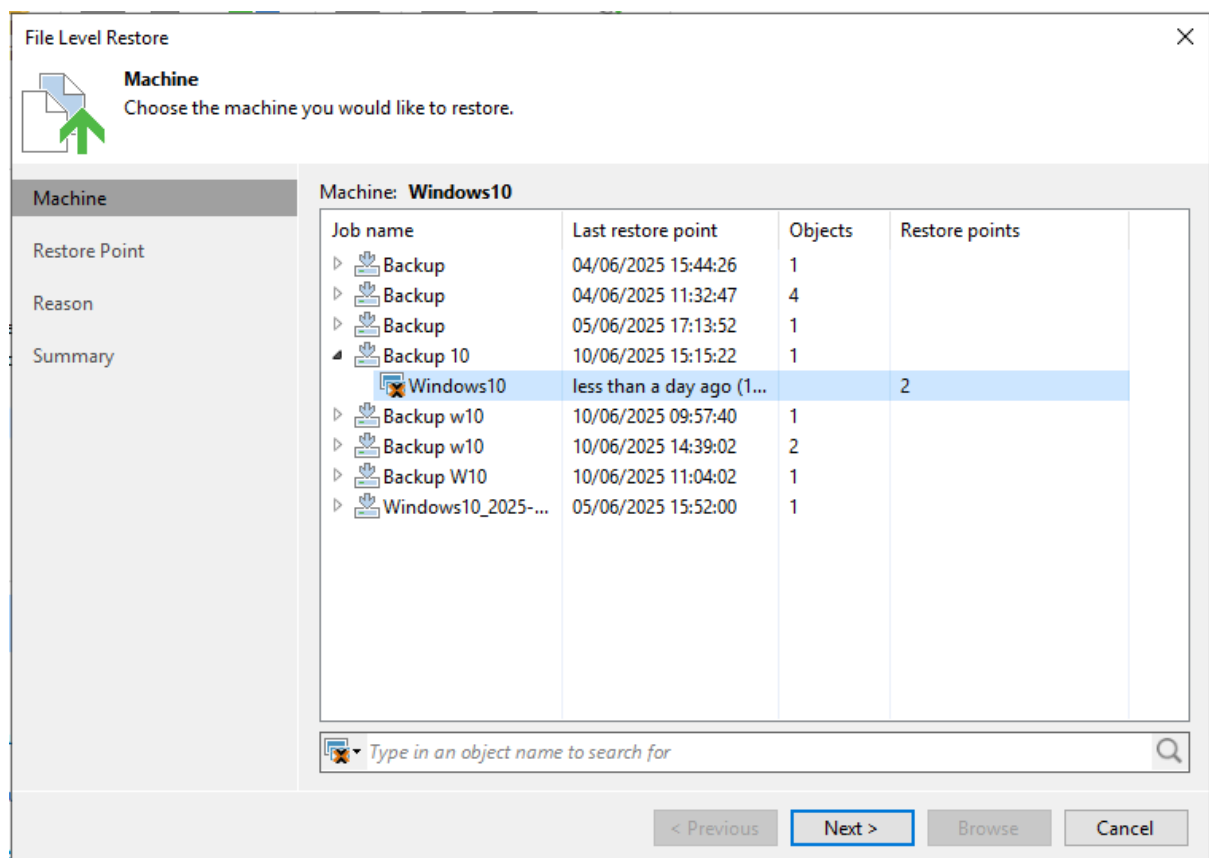

Après on choisit ce que l'on veut backuper.

The screenshot shows the 'Restore from Proxmox backup' dialog box. It prompts the user to 'Select the type of restore you want to perform.' There are four options: 'Entire machine restore' (Restores backup as a virtual or cloud machine.), 'Guest files restore' (Restores individual guest files from an image-level backup.), 'Export disk' (Exports disk content as a virtual disk file of the selected format.), and 'Publish disk' (Instantly publishes backed up disk content to any machine as a new volume. Any changes made to the disk content will be discarded when the disk is unpublished.). A 'Cancel' button is at the bottom right.

Pour moi c'est juste le disque pour l'instant.
On choisit la machine que l'on veut backuper.

On choisit la restauration.

File Level Restore

Restore Point
Select the restore point to restore guest OS files from.

On choisi le document qu'on veut restaurer :

Supprimer une vm et la restaurer.

Avant de faire une restauration complète d'une VM complète.

Faire c'est ligne de commande, pour supprimer toute configuration pour pas avoir de problème :

100 correspond au numéro de la VM.

- `rm -f /etc/pve/qemu-server/100.*`
- `rm -f /dev/GP_SSD/vm-100-disk-*`
- `rm -f /var/lock/qemu-server/lock-100.conf`
- `systemctl restart pvedaemon pve-cluster`

Puis vous pouvez faire la restauration de la VM.
